

Opioid Bootcamps

Stratis Health offers boot camps for you to improve your recognition of OUD in new and existing patients. When you attend our boot camp, you will be equipped with tools and data to describe different medications for opioid use disorder (MOUD) treatment, why they are the standard of care, and how they are initiated and managed with patients. The boot camp will provide you with information to reduce stigma related to OUD that impacts treatment and causes harm. You will learn how to engage clinical leaders, hospital leaders, and community partners to implement MOUD.

What our consulting package looks like for opioids

Boot Camp – Jails

Stratis Health offers a boot camp for medical staff to support dosing guideline/best practice and other emerging topics that require a deep dive. Annual, 4-hour session, pre-post

Boot Camp – for health systems on Implementing MOUD program (not health system specific)

Per health system strategies (including hospitals and clinics), policy review, educational event for physicians, pre-post. We help providers understand medication opioid use disorder (MOUD).

County Specific Event Planning

Stratis Health helps with opioid strategy planning and do boot camps for those who need deeper knowledge about opioid use disorder.

Process Improvement

Our medical teams can meet with medical and behavioral health team. This check-in would include early identification through practical workflow intervention, urine drug screen interpretation to facilitate expedient initiation of treatment to mitigate acute withdrawal, hospitalizations, suicide risk, and navigate ever changing drug trends and workflow efficiencies.

Stigma reduction training for jail staff

Trainings will be repeated twice to cover the shifts and will include information to reduce stigma by educating on practical explanations and approaches that demonstrate benefit to law enforcement and justice involved individuals (brief neurobiology, stats, early identification, and its benefits).
